

NEW Browser Requirements for Online Banking

At The Eastern Colorado Bank, we are dedicated to keeping your information safe by using the latest security technology. For that reason, we will be upgrading our TLS security in order to better serve our customers.

Transport Layer Security (TLS) provides a key security component regarding privacy and data integrity for internet browsers. TLS 1.2 is the most current version, and is considered to be the most secure. Any version below TLS 1.2 is considered less secure, thereby presenting a risk to your data.

Our Online Banking applications strive to provide a secure gateway for your financial information. As of April 9, 2018 you must be using TLS 1.2 on your device to access our Online Banking. If you are using the most up-to-date version of your chosen operating system or browser, this update will not affect you. However, if you are unable to log in, you may need to update your browser in order to access Online Banking.

Operating Systems:

- Mobile Safari 5 or higher
- Microsoft Windows 7, 8.0, 8.1 & 10
